Lecture 4 STABILIZATION METHODS FOR LOW **VOLUME ROADS**

INTRODUCTION

THREE PHASE SOIL SYSTEM

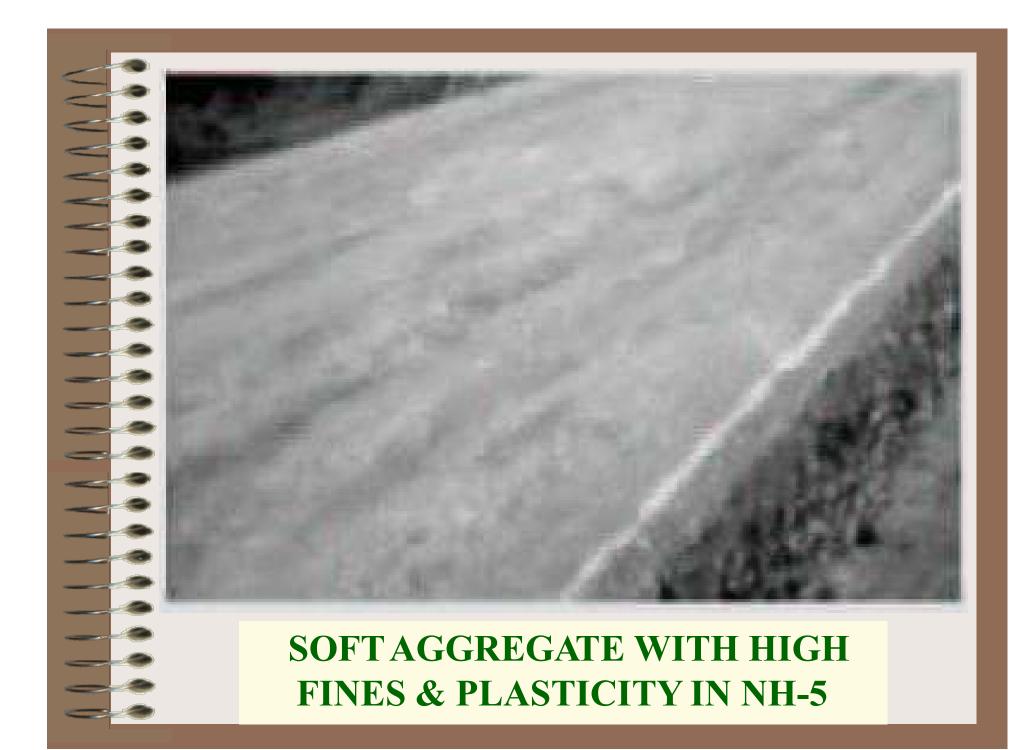

$$\sigma' = \sigma - \mathbf{u}$$

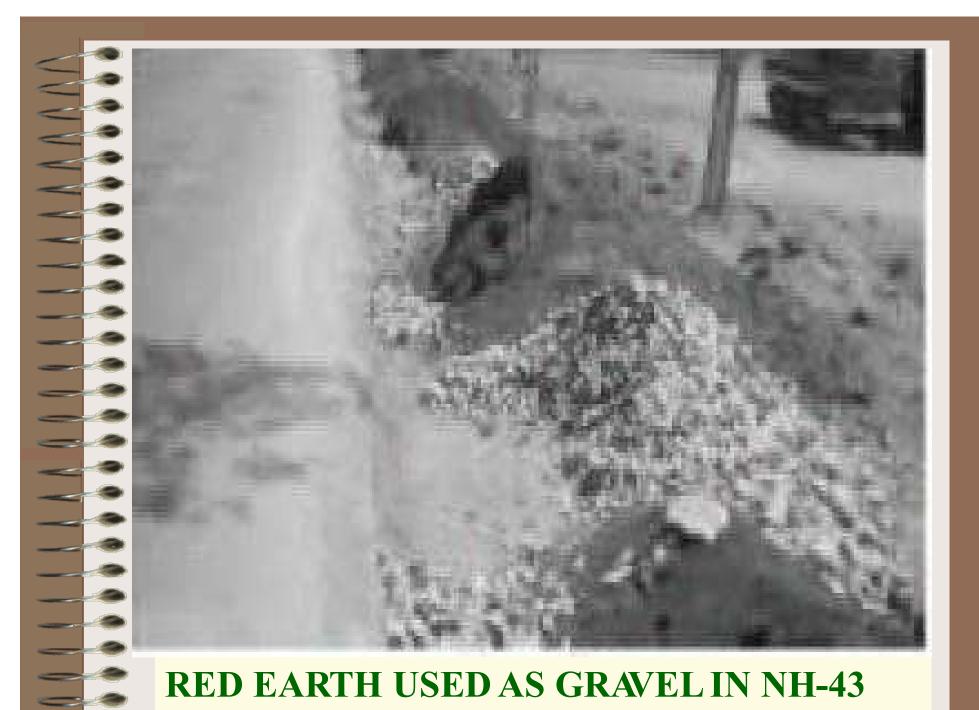

Condition of Gravel Road in Monsoon, A.P. (Bhavana Rao, 2005)

Red Earth as Gravel for WBM, A.P.

HIGHLY PLASTIC RUBBISH USE IN ROAD CONSTRUCTION, VIJAYAWADA

DAMAGED ROAD IN WEST GODAVARI DUE TO HIGH PLASTIC GRAVEL

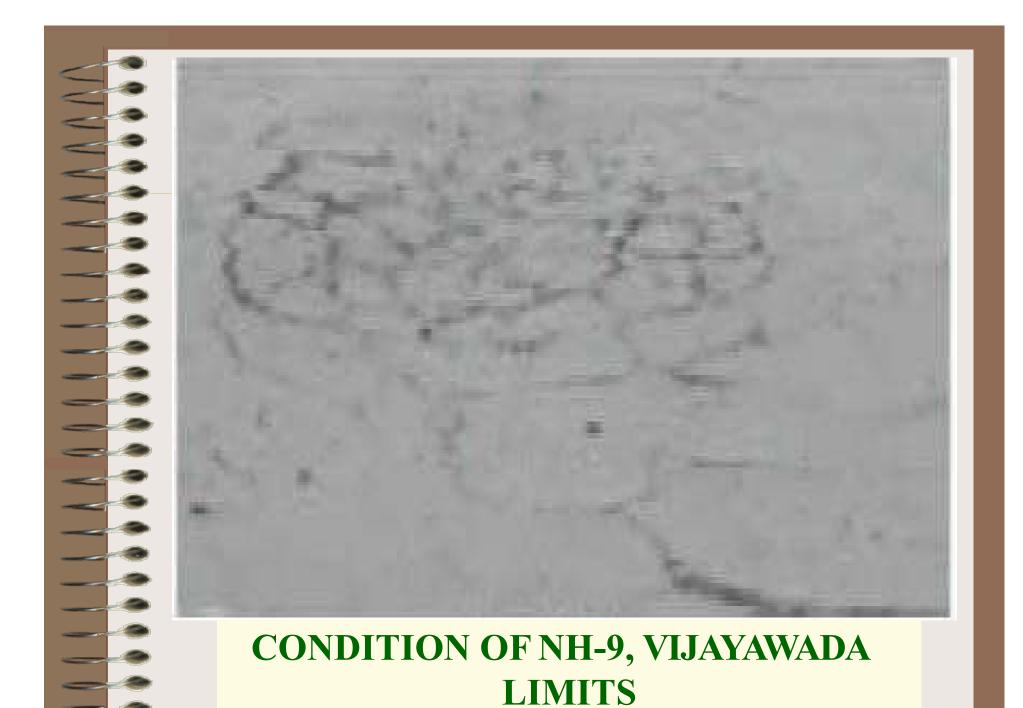

HIGH PLASTIC SOIL USE NEAR VIJAYAWADA

DISTRESS TO NH-9, VIJAYAWADA LIMITS

HIGH PLASTIC SOIL USE IN PORT ROAD VIZAG

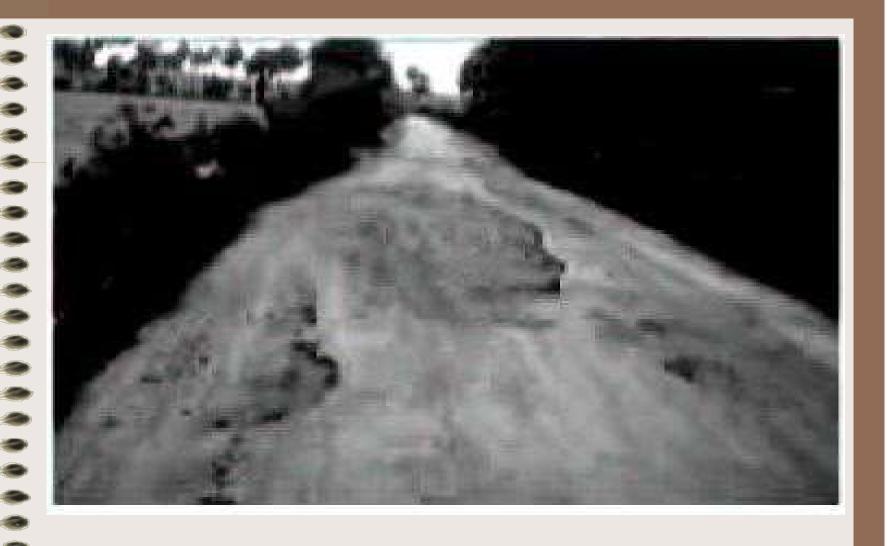

DAMAGED CONNECTING ROAD TO NH-5, VIJAYAWADA LIMITS

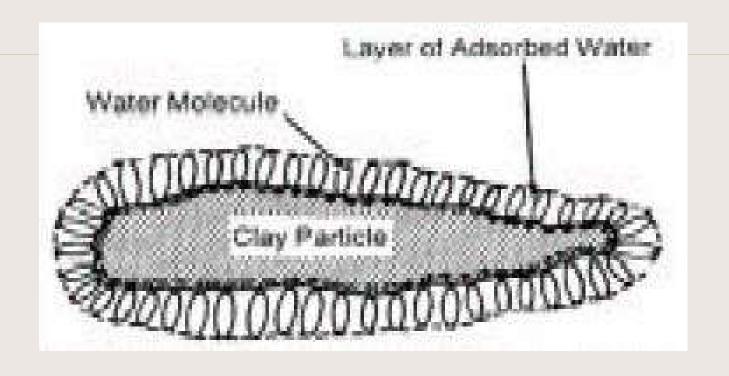

DAMAGED ROAD WITH RED EARTH BLINDAGE, W GODAVARI

DAMAGED ROAD IN WG DUE TO RED EARTH USE

Crushed Rock Base, NH-5

CLAY PARTICLE BEHAVIOUR

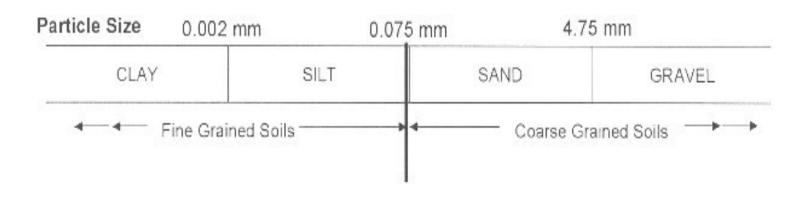

Table 2. Test Results on Gravel Samples from Approved Quarries in West Godavari, Krishna, Guntur and Prakasam Districts of Andhra Pradesh

| Sl. No. | Location of Quarry | % passing 75 m si e ve | Liquid limit in % | Plasticity index in % | CBR in % |
|------------|--|------------------------------|-------------------------|-----------------------------|-------------|
| 1. | Kunkudu quarry Km 67/500 of Narasapur — Aswaraopet Road | 31 | 36 | 14 | 11 |
| 2. | Road side quarry Km 91/440 of Narasapur — Aswaraopet Road | 32 | 39 | 17 | 12 |
| 3. | Road side quarry Km 36/500 of E.G.K Road | 35 | 37 | 17 | 9 |
| 4. | Quarry at Km 26/000 of Eluru — Jangareddy Gudem Road | 32 | 39 | 16 | 13 |
| 5. | Janampeta quarry at Km 11/600 of E.M Road + 0.200 Km CT | 33 | 38 | 16 | 10 |
| 6. | Quarry at Km 16/900 of P.K. Road + 0.800 Km CT | 34 | 38 | 16 | 8 |
| 7. | Gajjaram quarry at Km 2/508 of P.K. Road | 34 | 38 | 12 | 12 |
| 8. | Arugolanu quarry at Km 2/800 of P.N Road + 3.000Km CT | 33 | 38 | 17 | 12 |
| 9. | Quarry at Km 135.180 of M-N-K Road | 34 | 41 | 12 | 11 |
| 10. | Quarry at Km 8.30 of SN Road + 0.40 Km CT | 34 | 39 | 1 1 | 12 |
| 11. | Quarry at Km 8.65 of Y.S.Road | 32 | 37 | 13 | 10 |
| 12. | Quarry at Km 11.60 of V.V.Road +0.2 CT | 33 | 36 | 16 | 9 |
| 13. | Jakkampudi Quarry at Km 10.80 + 0.40 CT 1.0 of VV Road | 36 | 37 | 13 | 10 |
| 14. | Purushotapatnam Quarry at Km 4.830 V.V.Road | 34 | 37 | 12 | 1 1 |
| 15. | Gollanapalli Quarry at Km 23.80 with 2.20 CT to TVV Road | 33 | 40 | 15 | 12 |
| 16. | Quarry at Veerapanenigudem at Km 35.4 of V.V.Road | 35 | 41 | 13 | 10 |
| 17. | Ammanabrolu quarry Km 39/700 on Chirala – OngoleRoad | 36 | 37 | 13 | 13 |
| 18. | Dronadula quarry Km 0/0 on DTC road | 28 | 47 | 11 | 14 |
| 19 | Ongole – Nanadyala Road Km 4/830+1.000 Km CT | 24 | 38 | 16 | 10 |

Table 3. Test Results on Gravel Mixed with Fine Sand (Zone III) in Different Proportions

| Sl. No. | Location of Quarry | Item | Percentage passing 75m IS Sieve | LL % | P.I. % | CBR % |
|------------|---|-----------------------|---------------------------------------|---------|-----------|----------|
| 1. | Road side Quarry in Km 36/5 of E.G.K road W.G. District | Natural Gravel | 35 | 37 | 17 | 9 |

METHODS OF STABILISATION

MECHANICAL STABILISATION

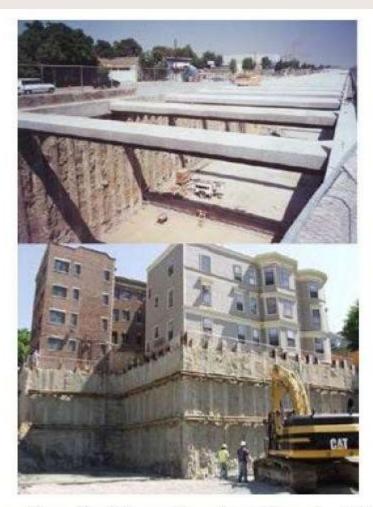

BITUMEN STABILISATION

CEMENT STABILISATION

LIME STABILISATION

Reinforced deep mixing retaining wall (Porbaha et al, 2005)

Top: Trench excavation railroad for an Alameda corridor project. Bottom: Structural cutoff wall during construction of new facility at Harvard University, Cambridge (Porbaha et al, 2005)

APPLICATIONS OF MECHANICAL STABILISATION TO LOW VOLUME ROADS

Soil-Aggregate Mixes

Table 2(a): Gradation Requirements for Subbase Aggregate

| Sieve Size | Percent Passing Designated Sieve | | |
|------------|----------------------------------|--------------|--|
| Sieve Size | Α | В | |
| 63 mm | 100 | CO COLUMN TO | |
| 50 mm | 97-100 | 100 | |
| 37.5 mm | | 97-100 | |
| 25 mm | 65-79 | | |
| 19 mm | | | |
| 12.5 mm | 45-59 | | |
| 9.5 mm | | | |
| 4.75 mm | 28-42 | 40-60 | |
| 0.425 mm | 9-17 | | |
| 0.075 mm | 4-8 | 0-12 | |

Liquid Limit not to exceed 25

Table 2(b): Gradation Requirements for Base Aggregate

| Claus Clas | Percent Passing Designated Sieve | | | |
|------------|----------------------------------|--------|--------|--|
| Sieve Size | А | В | С | |
| 50 mm | 100 | | | |
| 37.5 mm | 97-100 | 100 | | |
| 25 mm | | 97-100 | 100 | |
| 19 mm | 67-81 | | 97-100 | |
| 9.5 mm | | 56-70 | 67-79 | |
| 4.75 mm | 33-47 | 39-53 | 47-59 | |
| 0.425 mm | 10-19 | 12-21 | 12-21 | |
| 0.075 mm | 4-8 | 4-8 | 4-8 | |

Liquid Limit not to exceed 25 and PI not to exceed 6.

Table 3: Gradation and Plasticity Index Requirements for Surfacing

| Sieve Size | Percent Passing Designated Sieve | | |
|-----------------------|----------------------------------|--|--|
| 25 mm | 100 | | |
| 19 mm | 97-100 | | |
| 4.75 mm | 41-71 | | |
| 0.425 mm | 12-28 | | |
| 0.075 mm | 9-16 | | |
| Plasticity Index (PI) | 4-12 | | |

Liquid Limit not to exceed 35

SAND-CLAY MIXES

- Clayey soil for sands &gravels = 10-35%
- Sand for silty soils = 15-30%
- Sand for B.C. soil = 40-60%
- LL < 25%, PI < 6%, Min. CBR = 20%

SAND-GRAVEL MIXES

Sand-murrum mixes are popular in India.

Specifications are similar to soilaggregate mixes

> Availability of Sand?

STABILISATION OF SOIL WITH SOFT AGGREGATE (MEHRA'S METHOD)

70% SOIL + 30% AGGREGATE

Soil: P.I.=8-11%; Sand $\geq 33\%$

2. LIME STABILIZATION

Suitability of lime & Soils:

$$CaO > 70\%$$

$$-425\mu = 15\%$$

$$-75 \mu = 10\%$$

$$PI > 10\%$$

Sulphates < **0.20%**

Degree of pulverization:

$$-4.75 \text{ mm} = 80\%$$

$$-25 \text{ mm} = 100\%$$

Lime Reactivity: UCC 3 kg/cm² @ 7 days

AMOUNT OF LIME

Alluivial Soil / Murrum (PI: 10-15%) = 3%

Clay / BC (PI: 15-30%) = 3-5%

Highly Expansive Clay (PI > 30%) = 5-6%

For sub-base : Min. CBR = 20-30%

For base : Min. CBR = 80-100%

Due to doubtful quality control 2/3 rd laboratory CBR is taken for field.

COMBINATIONS:

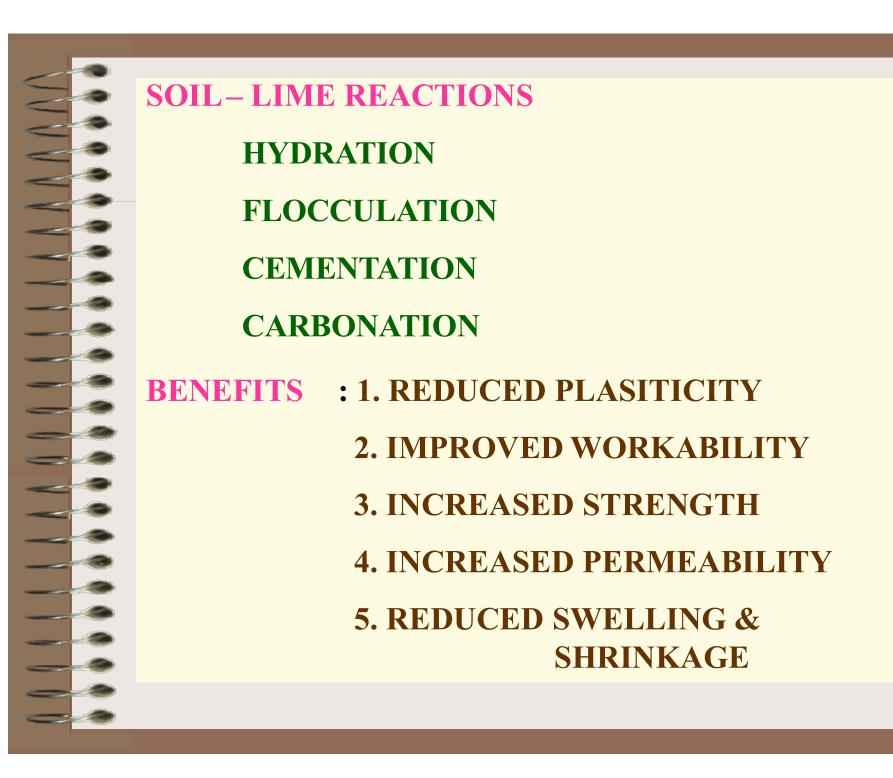

LIME, LIME-CEMENT, LIME-PUZZOLANA WITH

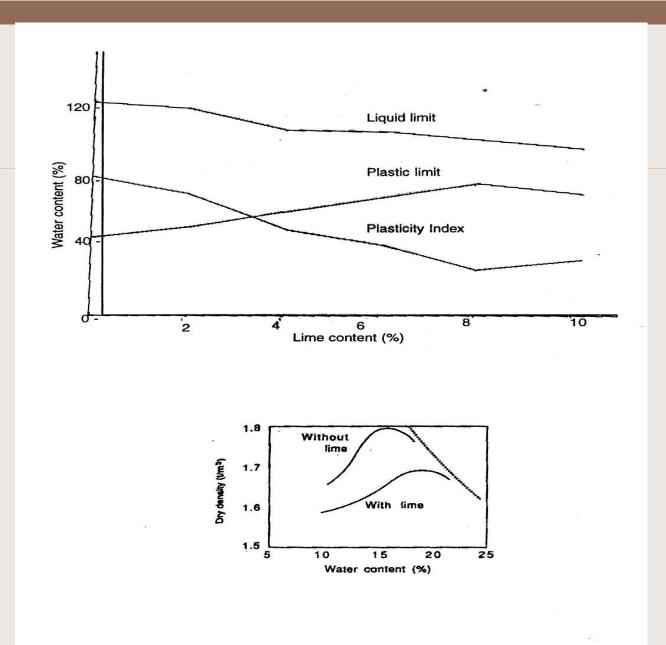

SOILS: Soils of medium plasticity (PI 5-20) and clayey soils not reactive to lime can be stabilised with lime and flyash

➤ Lime-flyash alone can be used for Base/Sub – Base course, avoiding soil.

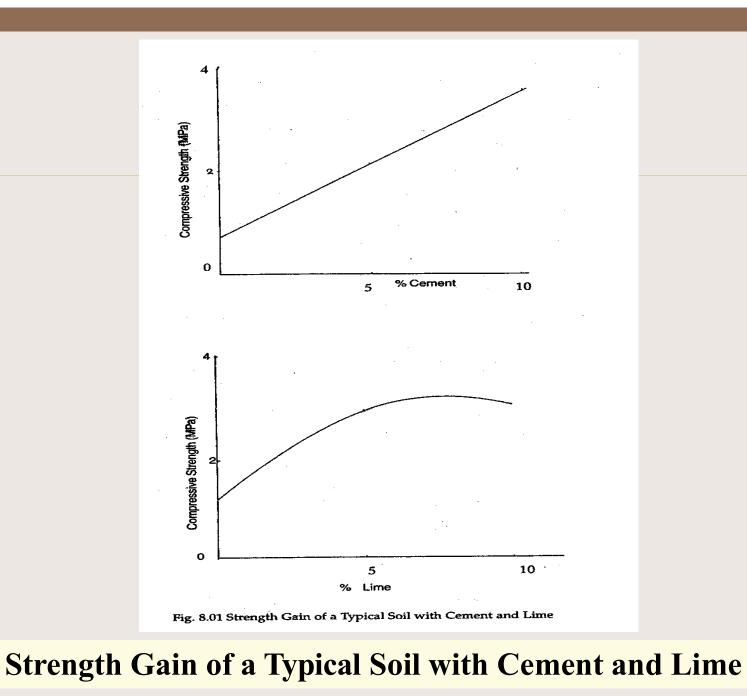

➤ Mix proportions are designed to obtain minimum unconfined compressive strength of 1.5 MPa after 28 days curing

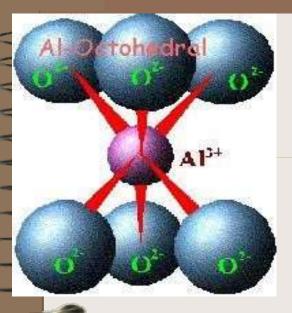

Chemical Requirements of Flyash (IS 3812 (Part 1): 2013)

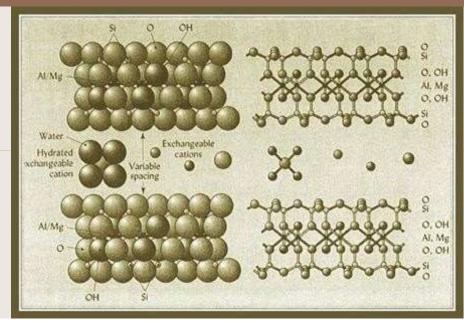

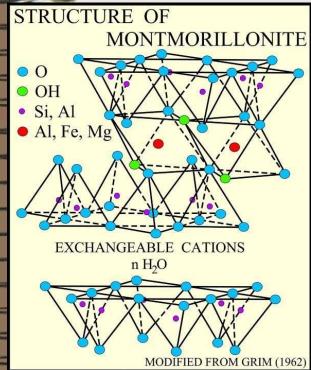

Effect of Lime on Plasticity and Compaction of soil

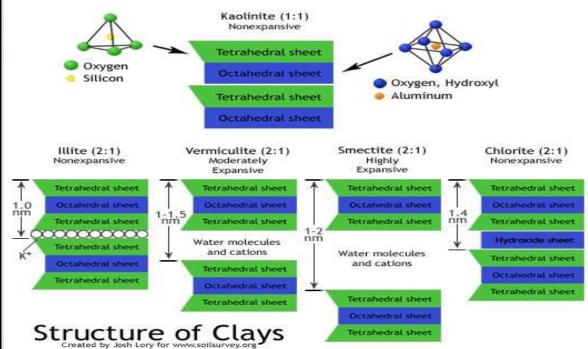

Expansive Soils

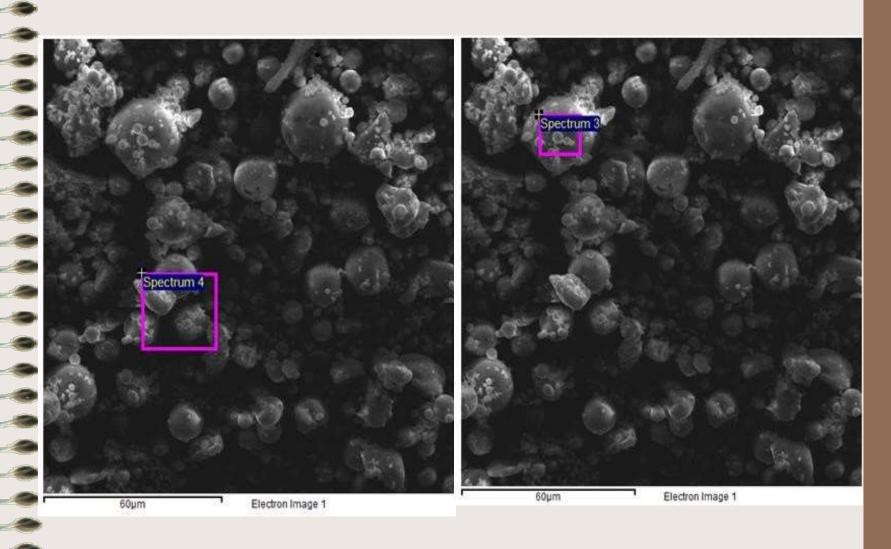

STUDIES AT NIT- WARANGAL

Chemical compositions of Fly-ash used are

| Chemical Composition | Fly ash | |
|----------------------|---------|--|
| CaO | 4.00 | |
| SiO_2 | 60.11 | |
| Al_2O_3 | 26.53 | |
| Fe_2O_3 | 4.25 | |
| SO_3 | 0.35 | |
| MgO | 1.25 | |
| Na ₂ O | 0.22 | |
| LOI | 0.88 | |

Fly ash is classified as Grade 1 (fine) according to the IS 3812 - 2013 (revised). Class-F fly ash based on their chemical composition.

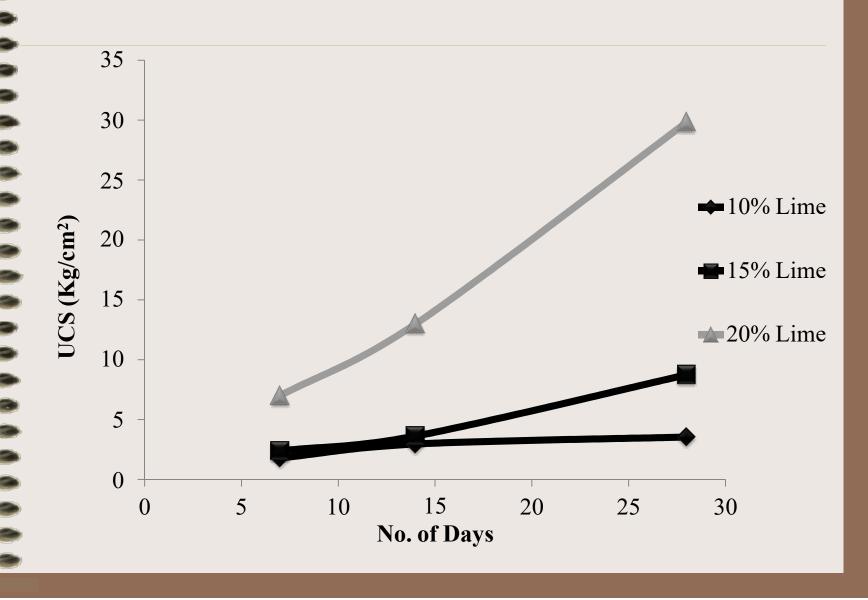

SEM Report of fly-ash

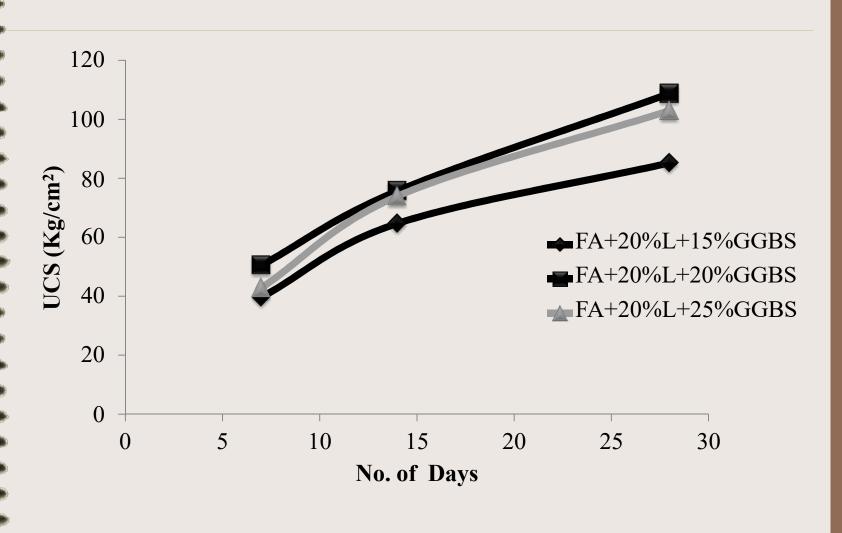

Chemical compositions of GGBS used are

| Chemical Composition | GGBS | |
|----------------------|-------|--|
| CaO | 32.6 | |
| SiO_2 | 34.06 | |
| Al_2O_3 | 20 | |
| Fe_2O_3 | 0.8 | |
| SO_3 | 0.9 | |
| MgO | 7.89 | |
| Na ₂ O | - | |
| LOI | .Nil | |

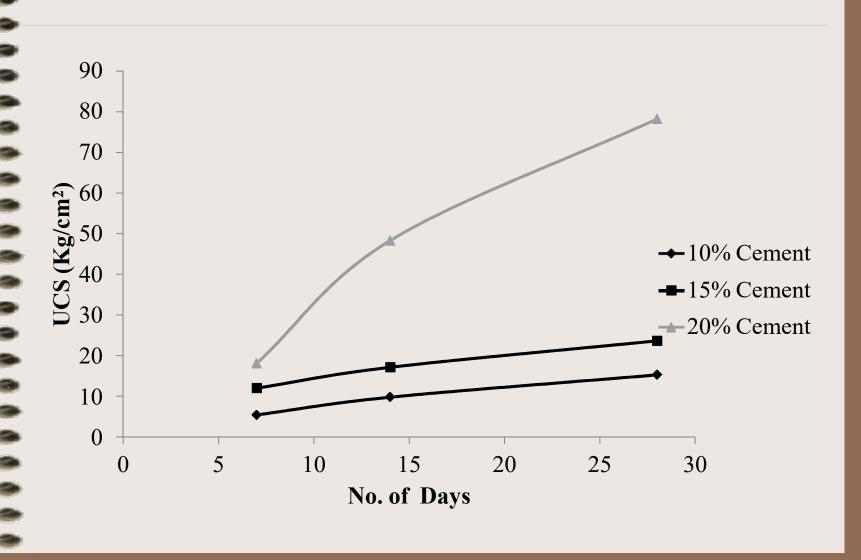

Fly ash + Lime...

Fly ash + Lime + GGBS

Fly ash + Cement

Comparison of test results with the Standard Values according to IRC 37-2012 for flexible pavement construction

3. CEMENT STABILISATION

TYPES OF SOIL – CEMENT MIXES

- 1. NORMAL SOIL CEMENT: 5-14% Cement & Sufficient Moisture Content For Compaction and Curing For Base & Sub-base Courses.
- 2. PLASTIC SOIL CEMENT: 5-14% Cement & Mortar consistency
- 3. MODIFIED SOIL CEMENT: < 5% Cement Generally for Sub-grade Stabilization. CBR can be greater than 25% making the material suitable for sub-base/base course.

Grading of Materials for Soil-Cement

| IS Sieve(mm) | Sub –base(Finer than) | Base(Range) |
|--------------|-----------------------|-------------|
| 53 | 100 | 100 |
| 37.5 | 95 | 95-100 |
| 19 | 45 | 45-100 |
| 9.5 | 35 | 35-100 |
| 4.75 | 25 | 25-100 |
| 0.60 | 8 | 8-65 |
| 0.30 | 5 | 5-40 |
| 0.075 | 0 | 0-10 |

Pulverization Requirement for soil:

$$-26.5 \text{ mm} = 100\%$$

$$-5.6 \text{ mm} = 80\%$$

SUITABILITY OF SOIL - CEMENT

- 1. TYPES OF SOIL: Ideal for Well graded Coarse Grained Soils.
- A useful rule for soil selection is that the plasticity modulus (product of PI and fraction passing 425 micron sieve) should be less than 250 and that the uniformity coefficient should be greater than 5. Sulphate < 0.25%

> Preferably for soils with LL< 45% & PI< 20%

2.CEMENT CONTENT FOR BASE COURSE

(UCC @ 7 days = 1700 kPa - Old)

(UCC @ 7days= 2800 kPa – Revised)

For Sub base – 1700 kPa @ 7days at present.

- 3.QUALITY & AMOUNT OF WATER
- 4.MIXING, COMPACTION & CURING
- 5.ADMIXTURES CaCl₂ FOR ORGANIC SOILS
 - LIME FOR HIGH PLASTIC CLAYS

-FLYASH FOR SP SOILS

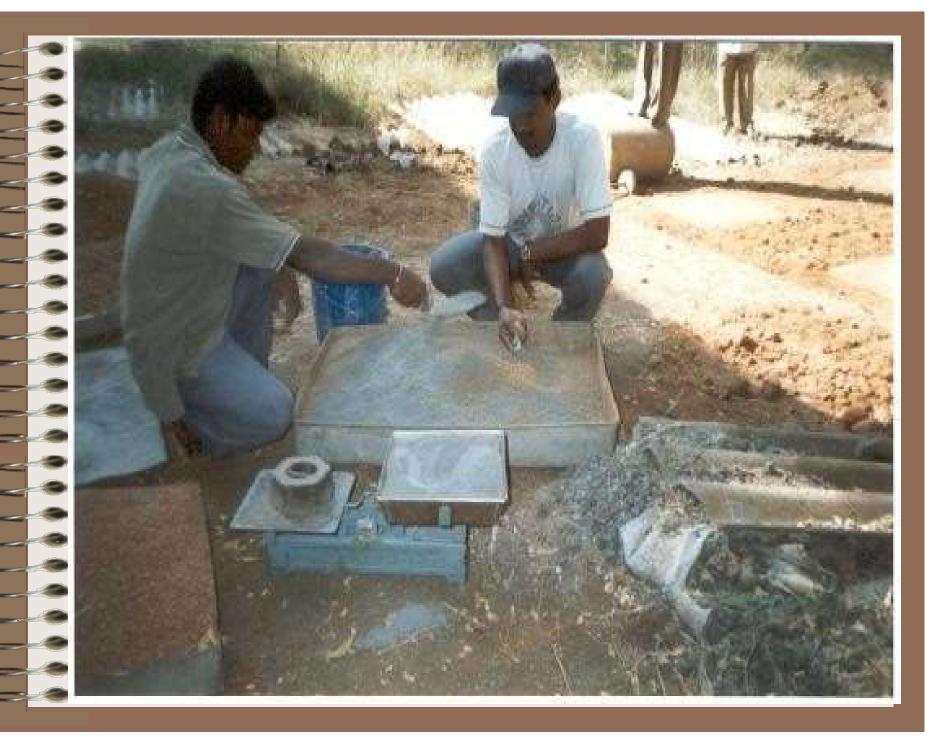

BENEFITS OF CEMENT STABILISATION

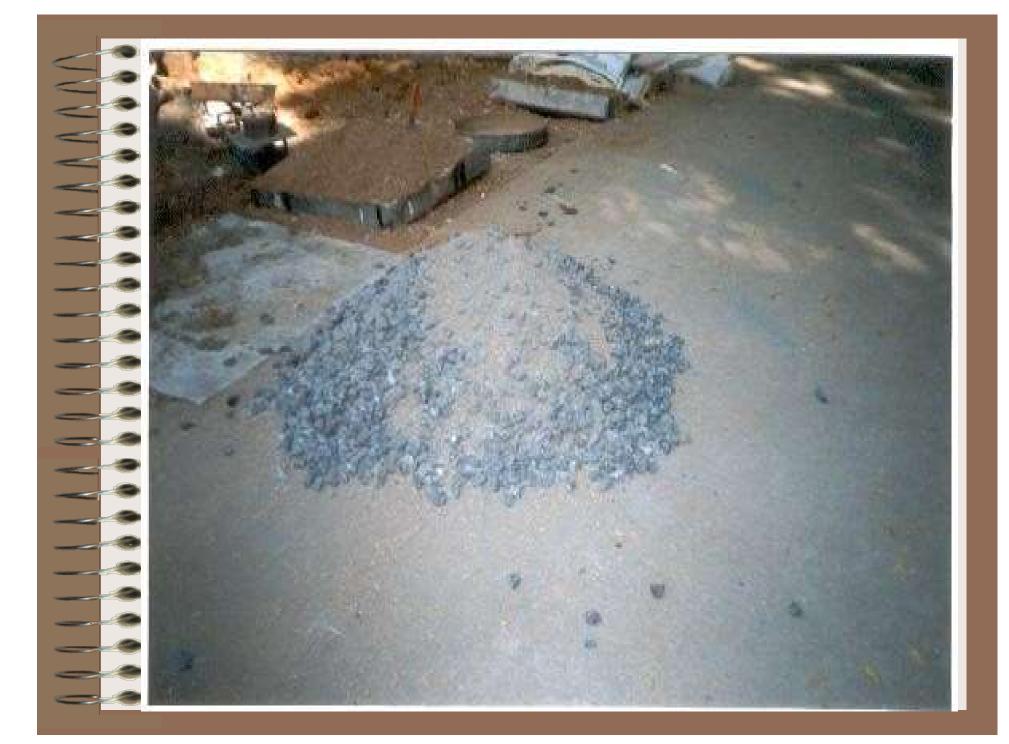

- 1. REDUCED PLASTICITY BY CEMENTATION AND FLOCCULATION
- 2. IMPROVED DENISTY & REDUCED O.M.C.
- 3. IMPROVED STRENGTH
- 4. REDUCED SWELLING & SHRINKAGE

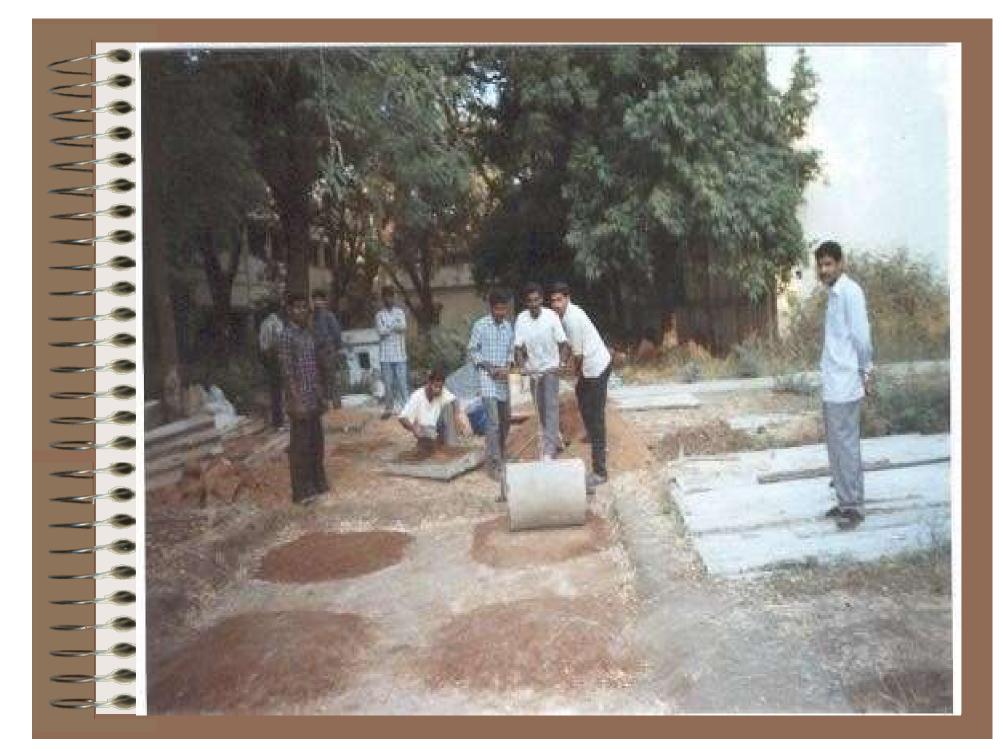

Experiments at NITW

Relative influence of lime and cement on CBR of murrum soil with liquid limit=35% and fines=14%

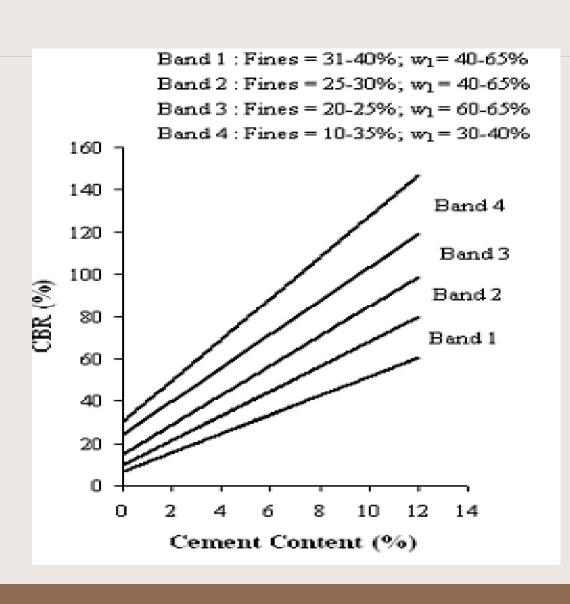

Relative influence of lime and cement on CBR of murrum soil with liquid limit=43% and fines=20%

Relative influence of lime and cement on CBR of murrum soil with liquid limit=62% and fines=25%

DEVELOPMENT OF CBR DESIGN CHART

Spreading of Cement + Stabil © Road Compound, Vijayawada

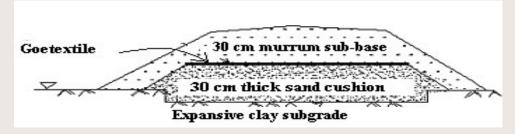

Stabil © Road Base Course @ Poranki, Vijayawada

Attempt for Cement stabilisation Near Repalle, Guntur District

30cm sand + 30cm thick murrum cushion.

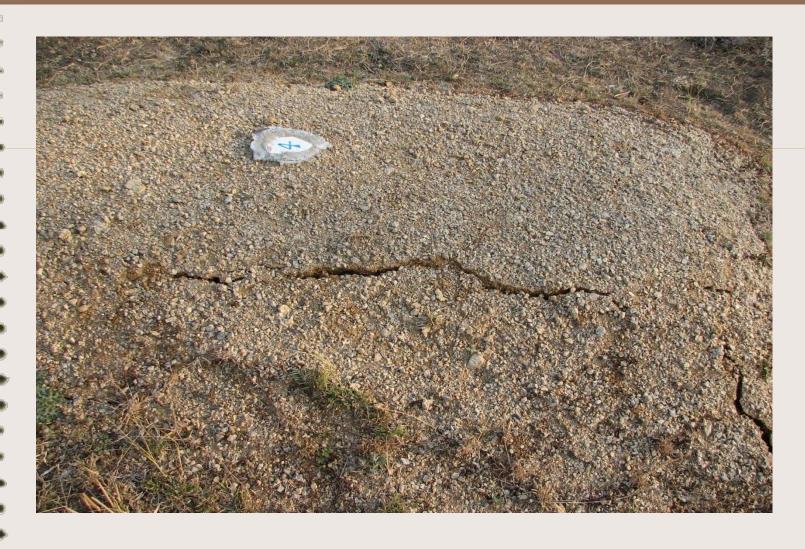

10% Lime treatment +60 cm murrum cushion .

6% Cement Stabilized Subgrade + 60cm Thick Murrum

30cm Sand + 30 cm Murrum and Geotextile Reinforcement

1% CaCl₂ Stabilized Subgrade + 60cm Thick Murrum Cushion

Geotextile + 60 cm Thick Murrum Cushion
